2030 Federal Transport Infrastructure Plan

TYPE OF TOOL
Plan

MAIN SECTOR
Transport

INFRASTRUCTURE GOVERNANCE PILLARS
*Long-term strategic vision;
Transparent, systematic and effective
stakeholder participation*

In a nutshell

OBJECTIVE: The 2030 Federal Transport Infrastructure Plan forms the basis for the development and upgrading of federal transport infrastructure in Germany.

Agency in charge
Federal Ministry for Digital and Transport

Levels of government
National

Year of implementation
2016

Current status
Fully operational*

Overview

The 2030 Federal Transport Infrastructure Plan (FTIP 2030) is Germany's most important transport infrastructure planning tool that lays the transport policy orientations for the next 10 to 15 years. This plan addresses both maintenance of the existing networks as well as upgrading and new construction projects for the road, rail and waterway modes. The federal states, members of parliament, the Federal Government itself, railway infrastructure companies, members of the public, trade associations and other stakeholders submitted over 2,000 concrete project ideas for appraisal in the FTIP 2030. Of these, federal trunk roads accounted for around 1,700, federal railways for around 400 and federal waterways for around 50.

The FTIP 2030 is the first Federal Transport Infrastructure Plan which was drawn up and developed with active public participation. During a period of six weeks, the public were given the opportunity to submit written comments on the Draft FTIP 2030. Approximately 39,000 opinions were provided to the draft FTIP 2030 to the Ministry for Digital and Transport. Around 18,400 opinions were provided electronically via an online form. The other inputs were provided via mail. After the participation of the authorities and the public was concluded, the Federal Ministry for Digital and Transport revised the FTIP draft on the basis of the evaluated comments. The report on the participation of the authorities and the public in the Draft FTIP 2030 includes a consolidated documentation of how the submitted comments were handled.
